

Pending tasks browser

Working with OCHEM often involves running long computationally intensive tasks, for example:

- creation of QSAR models
- molecule optimisation
- set comparison
- screening structures with ToxAlerts,
- etc

Fortunately, the users do not have to wait online while these tasks are completed. It is always possible to fetch the results of the finished calculation tasks in a special dialog: **pending tasks browser**.

The pending tasks browser allows to:

- fetch the results of the finished calculation tasks
- view the status of the running tasks
- view failed tasks
- delete/terminate calculation tasks

Pending tasks

The overview of all running tasks and all completed tasks awaiting your action
